* Error limits related to the nominal capacity (= maximum volume) indicated on the instrument, obtained when instrument and distilled water are equilibrated at ambient temperature (20 °C/68 °F) and with smooth operation.

** Error limit: EL = A + 2CV, according to DIN EN ISO 8655-6 Annex B (A = accuracy, CV = coefficient of variation, EL = error limit)

Note: If you need an official certification which confirms the error limits that are much stricter than those of DIN EN ISO 8655-3, we recommend a calibration certificate from an accredited calibration laboratory (e.g., the DAkkS laboratory at BRAND).

The titration volume is displayed in steps of 1 µl on instruments with 10 ml and 25 ml size and in steps of 2 µl for 50 ml size instruments. For titration volumes above 20 ml the display will automatically switch to steps of 10 µl.

Material and reagents

The instrument can be used for the following titration media (maximum concentration 1 mol/l):	
Acetic acid	Potassium bromide bromate solution
Alcoholic potassium hydroxide solution	Potassium dichromate solution
Ammonium iron (II) sulfate solution	Potassium hydroxide solution
Ammonium thiocyanate solution	Potassium iodate solution
Barium chloride solution	Potassium permanganate solution*
Bromide bromate solution	Potassium thiocyanate solution
Cerium (IV) sulfate solution	Silver nitrate solution*
EDTA solution	Sodium arsenite solution
Hydrochloric acid	Sodium carbonate solution
Hydrochloric acid in Acetone	Sodium chloride solution
Iodide Iodate solution*	Sodium hydroxide solution
Iodine solution*	Sodium nitrite solution
Iron (II) sulfate solution	Sodium thiosulfate solution
Nitric acid	Sulfuric acid
Oxalic acid solution	Tetra-n-butylammonium hydroxide solution
Perchloric acid	Triethanolamine in Acetone*
Perchloric acid in glacial acetic acid	Zinc sulfate solution
Potassium bromate solution	

* Use light shield inspection window

When the instrument is properly handled, dispensed liquid will only come into contact with the following chemically resistant materials: borosilicate glass, Al_2O_3, ETFE, PFA, FEP, PTFE, platinum-iridium; PP (screw cap).

Limitations of use

Chlorinated and fluorinated hydrocarbons or chemical combinations which form deposits may make the piston difficult to move or may cause jamming. Compatibility of the instrument for a special application (e.g., trace material analysis) must be checked by the user. For additional information, please contact the manufacturer. The instrument is not autoclavable.

Operating limits

This instrument is designed for titrating liquids, observing the following physical limits:

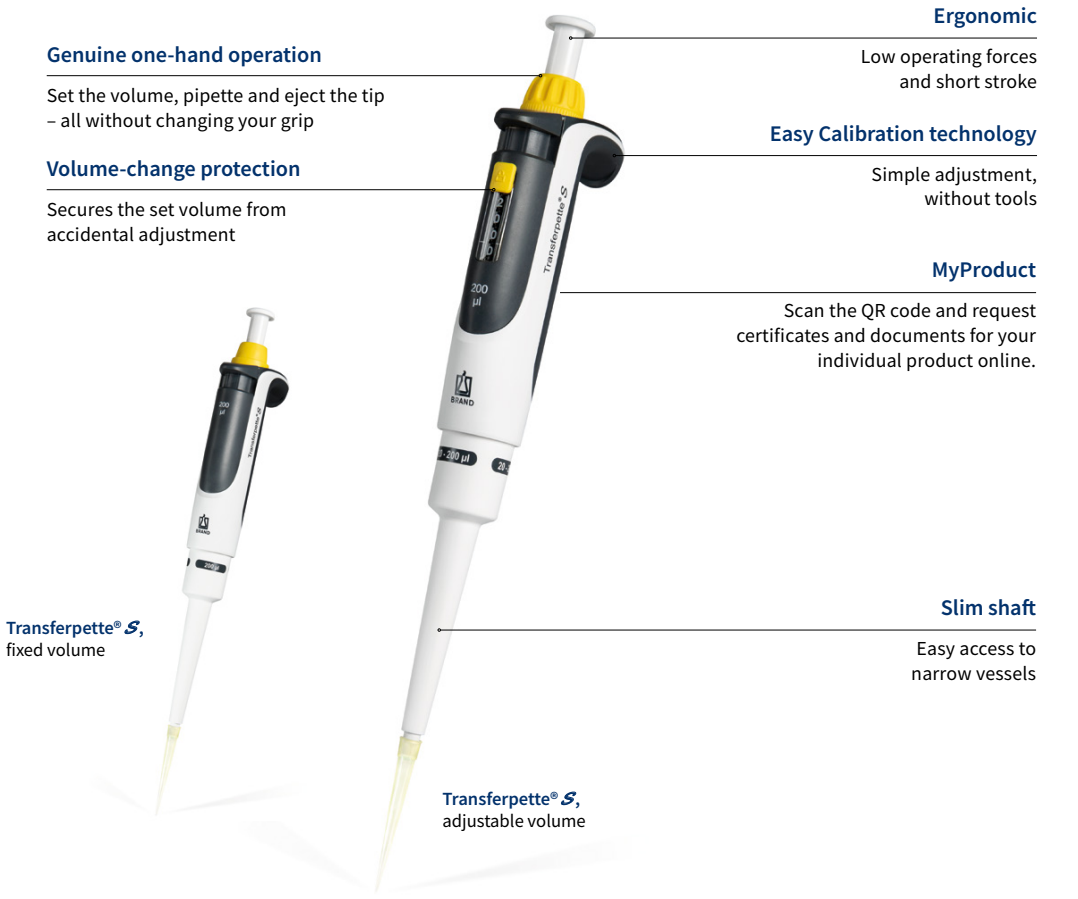

+ +15 °C to +40 °C (59 °F to 104 °F) of instrument and reagent
+ Vapor pressure up to 500 mbar
+ Viscosity up to 500 mm^2/s
+ Altitude: maximum 3000 m above sea level
+ Relative humidity: 20 % to 90 %

At a glance:
Advantages of the Transferpette® *S*

Whether you are using the single-channel pipette or the 8- and 12-channel models, the Transferpette® *S* is always the first choice for simple and efficient pipetting in demanding applications.

The single-channel pipettes cover a wide volume range from 0.1 µl to 10 ml. Pipettes with small nominal volumes provide high precision for small-volume applications such as those found in molecular biology, e.g. for pipetting enzymes.

Large nominal volumes are used for water and environmental analysis, for example, where durability is critical. For standardized applications with specific volumes, we offer economical fixed volume models.

Easy Calibration technology

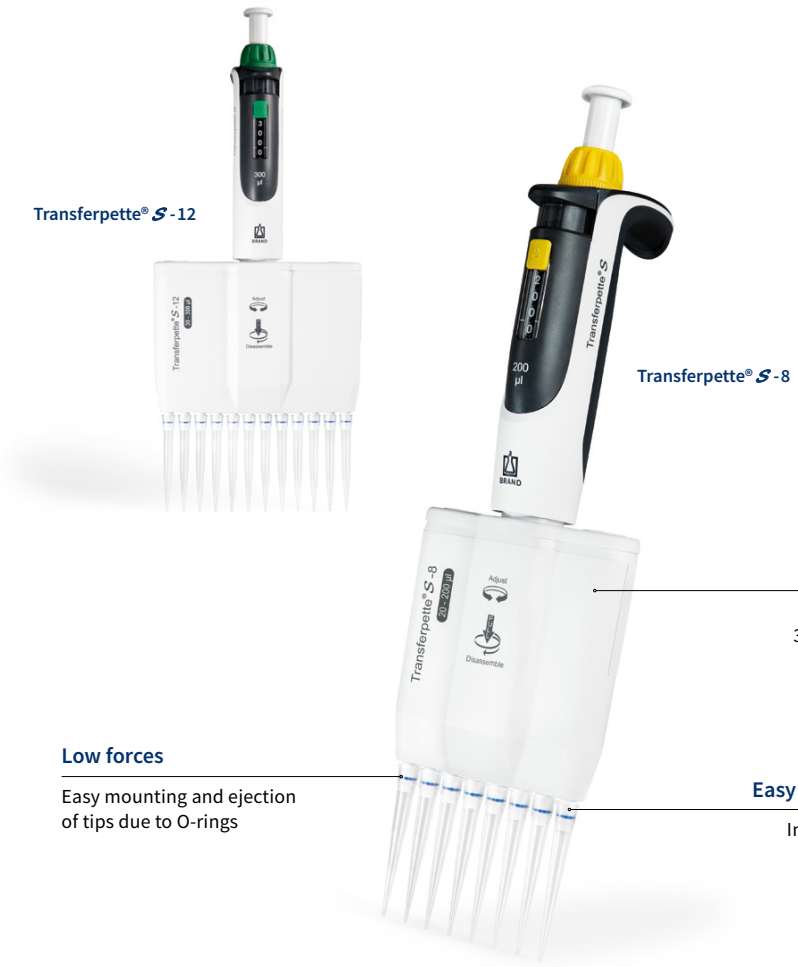

Volume-change protection

Integrated shaft coupling

Pipetting Robots

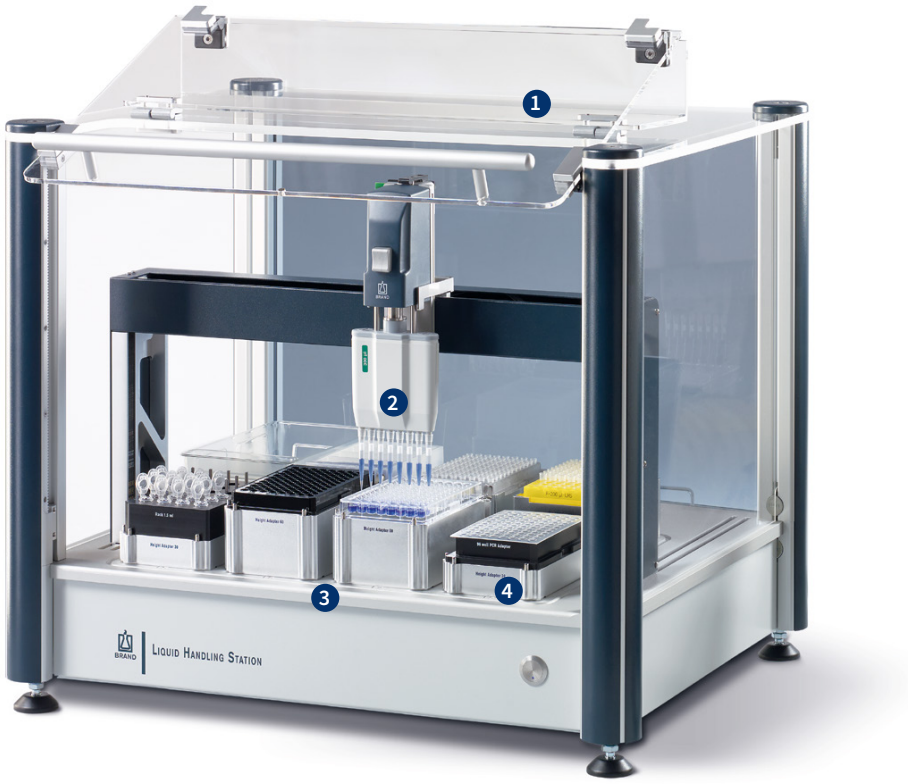

Liquid Handling Station from page 40

Liquid Handling Station flow from page 40

In detail: Pipetting with the Liquid Handling Station

While the robot processes your pipetting jobs, you have time for other tasks. The Liquid Handling Station works quietly and can be easily adjusted to handle all applicable work steps. Using the intuitive software, you can define your methods quickly, with no programming knowledge required. If the data is already available in a spread-sheet, creating methods is even easier with the import function. Particularly for small and midsized sample volumes, the robot, which operates on the proven air-interface principle, is a cost effective introduction to laboratory automation.

1 Front door
The space-saving design of the front door allows it to be swung up easily and it is mechanically braked when closing.

2 Pipette modules (Liquid Ends)
The basis for the pipette modules are components from the familiar Transferpette® *S*. Three single-channel Liquid Ends (SC) and three 8-channel Liquid Ends (MC) are available. Manual changes are so easy a child can do them, and they take only a few seconds. No tools are needed.

3 Work table
The work table has eight work positions, seven of which use the ANSI/SLAS format and can be freely assigned.

4 Adapters
Different height adapters, tip adapters and racks ensure reliable aspiration and the same working height as the plates and vessels in use. This saves time while pipetting.

Pipetting, not programming

The software of the Liquid Handling Station

With the Liquid Handling Station's intuitive software, defining your methods becomes easy and efficient. The graphical interface shows the work area of the pipetting robot, so you can quickly find your way around. Integrated instructions efficiently guide you through the creation of even the most complex methods.
This way the Liquid Handling Station can do what it was made for: quickly and conveniently automating repetitive pipetting tasks, so that you can concentrate on more important things.

Standard workflow:
1. Define the name for the pipetting method
2. Set up the work table
3. Define the transfer commands
4. Start executing
5. Done!

Functions:
- Professional user management
- Predefined liquid properties (liquid types) that can be changed or added at any time
- Disposable item (labware) database can be added to on a customer-specific basis
- Testing of inconsistencies by the software
- Automatic logging of procedures (customizable reports)
- Context-sensitive help function
- Data import/export
- E-mail and sound notifications
- Timeline
- Simulation of the programmed methods

Everything responds to your commands

Four main commands for your success:

Transfer:
Specifies nearly all pipetting tasks; e.g. multidispensing, creating dilution series, pooling, etc.

Wait:
Defines wait times, e.g. for incubation.

Mix:
In order to efficiently mix samples.

Break:

Liquid Handling Station *flow*

Do your samples have to be protected against exposure to particles and microorganisms? Then the Liquid Handling Station flow is the right pipetting robot for you. The FlowBox directs filtered air in a horizontal, laminar air stream through the work area, which prevents contamination.
Primary applications are those in which the liquids must be free of particles and microorganisms[1]. The ambient air of the Liquid Handling Station flow is exchanged more than four times per minute. The exhaust air escapes through openings in the front door. This technology conforms with the requirements of ISO 14644-1 (Class 5) and GMP Annex 1 (Class A). The inner compartment is free of particles in less than 5 minutes.

[1] Operation with FlowBox function not suitable for samples harboring a health risk when spread by the laminar air flow (e.g. Risk Group 2 (RG2)) and higher biological substances).

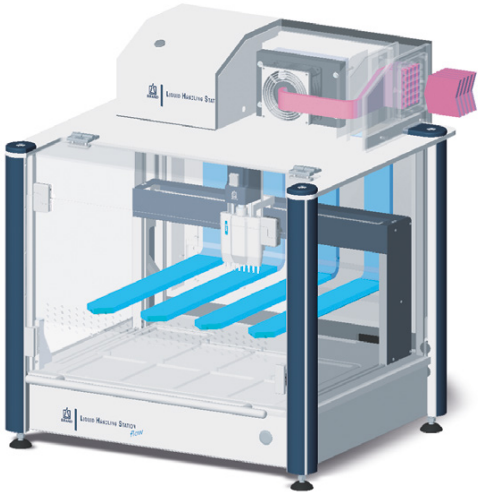

Particle-free conditions in a matter of minutes

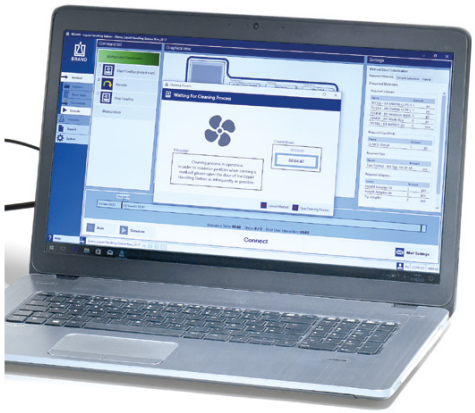

Four minutes after switching on the FlowBox, no particles of 0.5 µm, 0.7 µm, 1 µm, 3 µm and 5 µm are detectable inside[2].

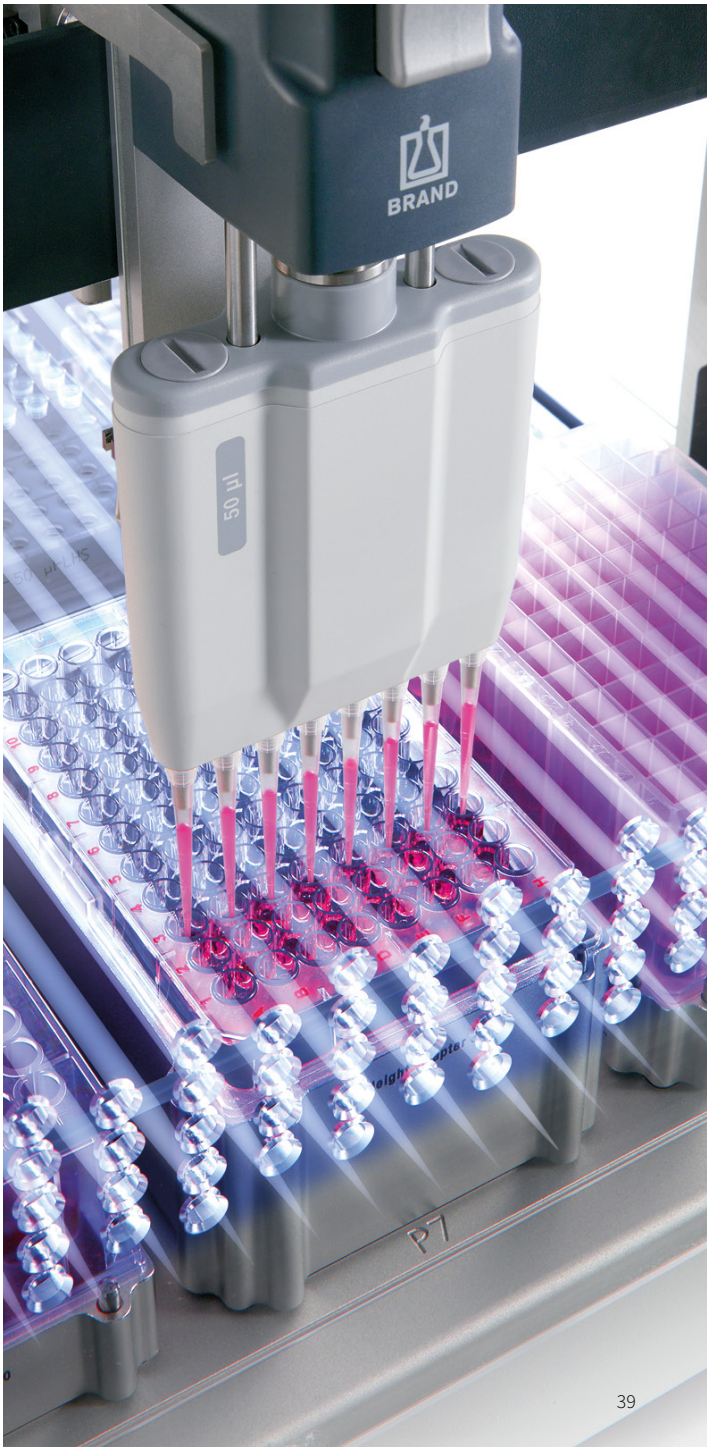

[2] Detection method: LIGHTHOUSE Handheld 5016 laser-type airborne particle counter, sample volume: 0.1 cf/min (2.83 l/min)

Protect your samples

A microprocessor-controlled air stream cleans the entire work area of the Liquid Handling Station flow. The incoming air is filtered by an H14 HEPA filter with an efficiency rate of 99.995%. This reliably protects your valuable samples against contamination.

Life Science Consumables from BRAND

Cleanroom quality

BRAND disposables for the field of life sciences are manufactured under controlled conditions in Germany, in one of the world's largest cleanrooms for laboratory disposables (ISO 14 644-1 Class 5, 7 and 8).

Continuous cleanroom monitoring, accompanied by precise regulation of the ambient conditions, results in high temperature stability throughout the entire production area. In combination with batch-related monitoring of the raw materials and end products, this stability guarantees the consistently high quality of BRAND life science products.

Quality of raw materials
+ High-quality granulates
+ Extensive testing of incoming goods

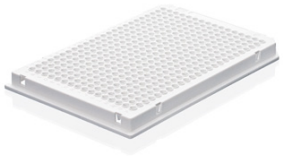

Production quality standards/controls
+ Cleanroom classes in accordance with ISO standards
+ Continuous cleanroom monitoring
+ High-quality injection molding tools
+ Quality controls during production
+ Exclusion of additives, such as mold release agents, in the production process

End product inspection
Depending on the product, e.g.
+ Leak test
+ Compatibility test

Simple, easy, and efficient work – some examples:

Unlimited flexibility with BRAND Insert 2in1 cell culture inserts

Greater sensitivity during qPCR reactions with BRAND 384-well PCR plates

Proliferation of CHO cells on BRAND*plates*® cellGrade™ surface

Microtubes with secure lid closure

Quality of raw materials

Sensitive applications, such as enzyme tests, PCR or the purification of nucleic acids and proteins, require the use of plastic disposables of the highest quality. For the production of pipette tips and PCR products BRAND uses specially selected PP types that are free of the additives di(2-hydroxyethyl) methyldodecylammonium (DiHEMDA) and 9-octadecenamide (oleamide). These two additives, which are often found in PP granulates, can interfere with biological tests and lead to false results. When source materials are selected for life science products, BRAND ensures any substances that could leach out of the raw material and influence the biological tests are reduced to the minimum necessary for processing. Mold release agents, such as stearate and erucic acid amide, are not used in the production process.

BIO-CERT®

BIO-CERT® products from BRAND meet the highest quality standards and offer quality levels dedicated to the application. In addition to the general Certified Quality Label, special quality levels for PCR, cell culture and liquid handling are available. This means you can quickly and easily find the optimal BIO-CERT® products for your application.

Reliability for your analyses BLAUBRAND® Volumetric instruments

BLAUBRAND® volumetric instruments fulfill increasing quality demands for transmitting liquids (volumetric and graduated pipettes), producing standardized samples or dilution series (volumetric flasks, graduated and mixing cylinders) or titrating/ analyzing samples (burettes).

Long service life

Before calibration, thermal stress must be removed from the blank glassware. After calibration, specially developed quality printing inks are fired into the materials at approx. 500° C. This makes BLAUBRAND® volumetric instruments especially robust, so that they provide a long service life. In addition, this process ensures that BLAUBRAND® volumetric instruments can be heated up to 250° C in a drying cabinet or sterilizer without this causing a permanent change in volume.

Adjustment and marking

Every glass volumetric instrument is individually calibrated. For measuring instruments with scales, such as graduated pipettes, burettes and graduated cylinders, flexible screen stencils are used. These stencils can be stretched to match the calibration marks accurately, so that the measuring precision is maintained for all intermediate volumes.
Computer-controlled systems guarantee the best possible precision for fully automated production processes.

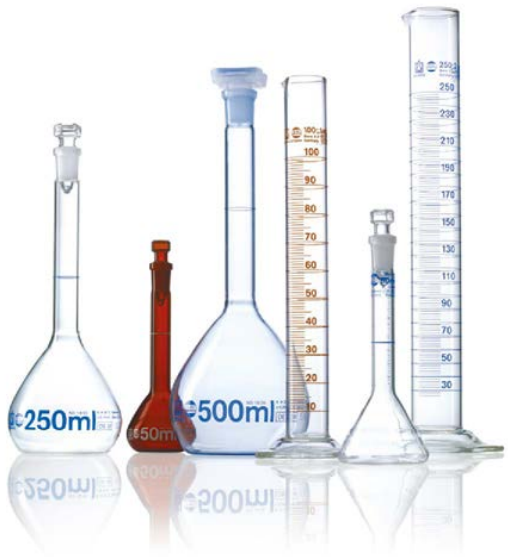

Error limits | Quality management

BRAND® manufactures glass volumetric instruments in accordance with current DIN EN ISO standards. Specified error limits are observed with at least 99.6% reliability. BRAND confirms this by including batch, individual, or DAkkS certificates, which also show that our products frequently perform far better than specified error limits.

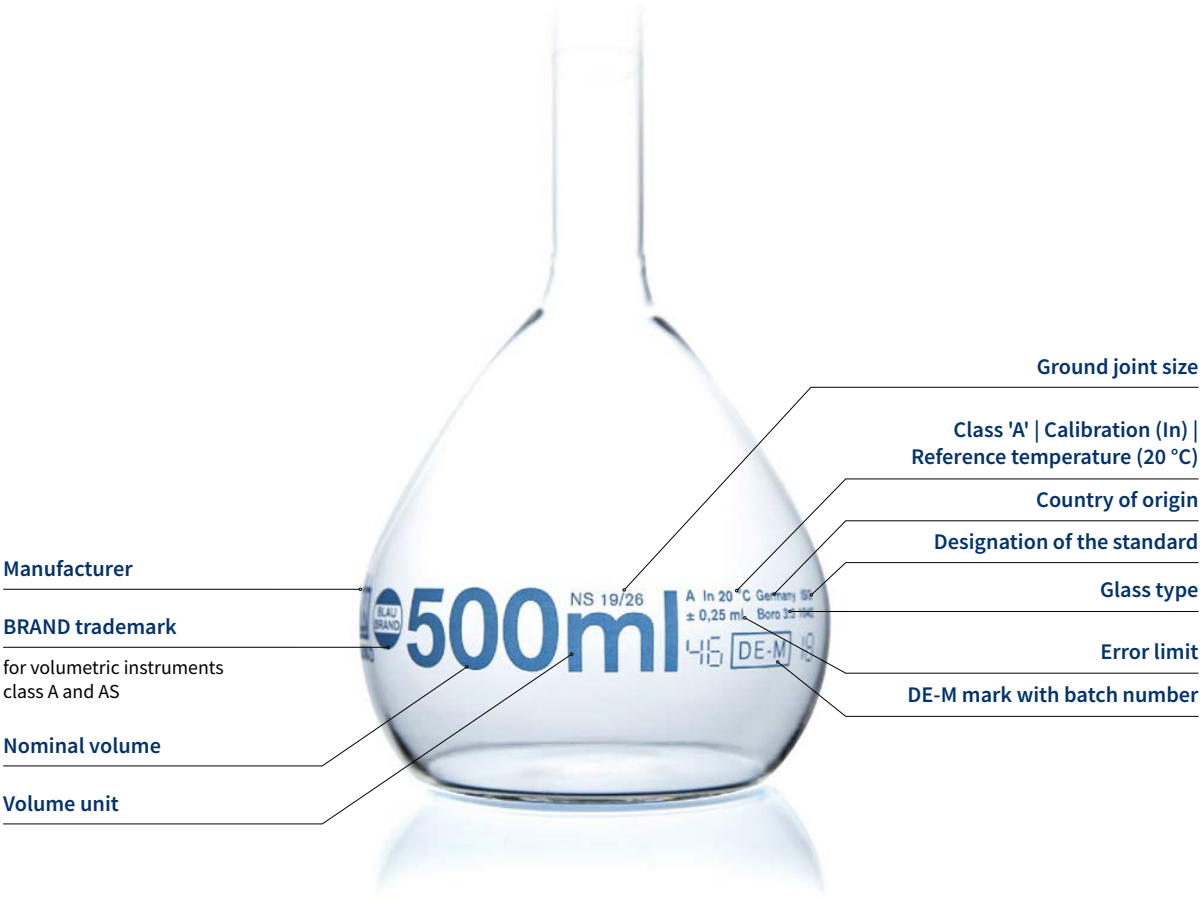

Reference temperature

The reference temperature 20°C applies to our volumetric instruments which are produced according to DIN EN ISO standards. If a volumetric instrument calibrated at 20° C is used at 27° C, the volume expansion of the material will lead to an additional deviation in the measurement, which at 0.007% (borosilicate glass 3.3) or 0.02 % (soda-lime glass) are much smaller than the error limit for the volumetric instrument. In practical application, therefore, the reference temperature is only of minor importance. However, if an adjustment or calibration is carried out at a different temperature, the measured values must be corrected accordingly (see DIN EN ISO 4787).

- + Adjustments carried out using computer-controlled production facilities
- + Individually adjusted volumetric instruments, highest precision even for partial volumes
- + AQL ≤ 0.4, i.e. the error limits are met with a reliability of at least 99.6 %
- + Long service life through the use of robust blanks and high quality printing colors
- + No permanent volume changes after heating, up to 250 °C
- + Delivery incl. lot certificate, optional with individual certificate or DAkkS calibration certificate available

Test equipment monitoring

BLAUBRAND® volumetric instruments are defined as measuring equipment (e.g. EP, USP). Therefore laboratories working in accordance with GLP guidelines, accredited under DIN EN ISO/IEC 17 025, or certified under DIN EN ISO 9001 must complete measuring equipment monitoring.
The testing of volumetric instruments is done gravimetrically according to DIN EN ISO 4787. So that calibration can be done rapidly and easily, while minimizing sources of error, BRAND provides detailed testing instructions (SOP) for every type of volumetric instrument, free of charge.
Further information, such as for monitoring of test equipment, can be found at: www.brand.de.

DE-M

All BLAUBRAND® volumetric instruments kept and used for measurements in legally regulated applications are marked DE-M. The manufacturer BRAND uses this mark to certify the conformity of the instruments with the German Measurement and Calibration Regulation (replaces the previous Calibration Regulation).
BRAND lists all the test equipment used in each lot and individual certificate.

Batch certificate

The mean value and standard deviation for the batch and date of issuance are documented on the certificate (batch number: production year/batch).

Individual certificate

The measured volume, measurement uncertainty, and date of issuance are documented on the certificate (unique serial number: production year/batch/device serial number.
